Measures Definitions

Category	Measure Name	Business Definition	DAX Formula
Transits	Number Of Transits	Total number of ship transits in the current filter context.	`COUNT ( Fact_Shipments[shipment_id] )`
	On-Time Transits	Number of transits completed without delay.	`CALCULATE ( [Number of Transits], Fact_Shipments[shipment_delay_days] = 0 )`
	Delayed Transits	Number of transits that experienced a delay.	`CALCULATE ( [Number of Transits], Fact_Shipments[shipment_delay_days] > 0 )`
Delay	Average Delay (delayed transits only)	Average delay duration considering only delayed transits.	`CALCULATE ( AVERAGE ( Fact_Shipments[shipment_delay_days] ), Fact_Shipments[shipment_delay_days] > 0 )`
	Delay Rate %	Percentage of transits that were delayed.	`DIVIDE ( [Delayed Transits], [Number of Transits] )`
Financials	Total Revenue (USD)	Total revenue generated from canal transits.	`SUM ( Fact_Shipments[shipment_revenue_usd] )`
	Total cost (USD)	Total operational cost associated with transits.	`SUM ( Fact_Shipments[shipment_cost_usd])`
	Profit (USD)	Net profit generated from transits.	`[Total Revenue (USD)] - [Total Cost (USD)]`
	Profit Margin %	Profit as a percentage of total revenue.	`Profit Margin % = DIVIDE ( [Profit (USD)], [Total Revenue (USD)] )`
	Revenue YTD	Revenue accumulated from the start of the year to date.	`Revenue YTD = TOTALYTD ( [Total Revenue (USD)], Dim_Date[date] )`
	Revenue Last Year	Revenue for the same period in the previous year.	`Revenue Last Year = VAR CurrentYear = MAX ( Dim_Date[year] ) RETURN CALCULATE ( [Total Revenue (USD)], FILTER ( ALL ( Dim_Date ), Dim_Date[year] = CurrentYear - 1 ))`
	Revenue YoY	Year-over-year change in revenue.	`Revenue YoY = VAR LY = [Revenue Last Year] RETURN IF (`

			ISBLANK (LY) || LY = 0, BLANK (), DIVIDE ([Total Revenue (USD)] - LY, LY))
	Revenue Previous Month	Revenue generated in the previous month.	Revenue Previous Month = VAR CurrentMonth = MAX (Dim_Date[Month Start]) VAR PrevMonth = EDATE (CurrentMonth, -1) RETURN CALCULATE ([Total Revenue (USD)], REMOVEFILTERS (Dim_Date), TREATAS ({ PrevMonth }, Dim_Date[Month Start]))
	Revenue MoM	Month-over-month change in revenue.	Revenue MoM = IF (ISINSCOPE (Dim_Date[month]) || ISINSCOPE (Dim_Date[month_name]), [Revenue MoM (Monthly)], VAR CY = MAX (Dim_Date[year]) VAR FirstM = CALCULATE (MIN (Dim_Date[month]), FILTER (ALL (Dim_Date), Dim_Date[year] = CY)) VAR LastM = CALCULATE (MAX (Dim_Date[month]), FILTER (ALL (Dim_Date), Dim_Date[year] = CY)) VAR RevFirst = CALCULATE ([Total Revenue (USD)], FILTER (ALL (Dim_Date), Dim_Date[year] = CY && Dim_Date[month] = FirstM)) VAR RevLast = CALCULATE ([Total Revenue (USD)], FILTER (ALL (Dim_Date), Dim_Date[year] = CY && Dim_Date[month] = LastM)) RETURN IF (ISBLANK (RevFirst) || RevFirst = 0, BLANK(), DIVIDE (RevLast - RevFirst, RevFirst)))
	Revenue MoM (Monthly)	Month-over-month revenue change optimized for monthly visuals.	Revenue MoM (Monthly) = VAR CY = SELECTEDVALUE (Dim_Date[year]) VAR CM = MAX (Dim_Date[month]) VAR PrevY = IF (CM = 1, CY - 1, CY) VAR PrevM = IF (CM = 1, 12, CM - 1) VAR PrevRevenue = CALCULATE ([Total Revenue (USD)], FILTER (ALL (Dim_Date), Dim_Date[year] = PrevY && Dim_Date[month] = PrevM)) RETURN IF (ISBLANK (PrevRevenue) || PrevRevenue = 0, BLANK(), DIVIDE ([Total Revenue (USD)] - PrevRevenue, PrevRevenue))
